Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

1. Applicant is advised that should claim 2 be found allowable, claim 3 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Reichman et al. (US 6,240,073).

2. Regarding claims 1-3, Reichman discloses a method of communicating data formed into multiple packet messages (fig. 3) through a network to an output port (fig. 1; note: satellite

output of relayed message). The method comprises communicating requests for sending data to the output port via unscheduled transmission (col. 20, lines 25-26; note: random access requests for a dedicated transmission channel - col. 15, lines 43-45) and delivering data to the output port in response to the requests via scheduled transmission (fig. 3; col. 15, lines 43-45; col. 14, lines 52-57).

3. Regarding claims 2-3, the packets are transmitted in uninterrupted sequence (fig. 3; col. 15, lines 43-44).

Allowable Subject Matter

Claims 4-39 are allowed.
